

Problems with mpeg video

To: hackers@freebsd.org

I asked this question on -questions, and got no answers (or at least none that I saw).

I recently upgrade from a 1gig tunderbird to a 3gig P4 system, both running 5-STABLE from post 5.4-RELEASE. The system and all ports were rebuilt with make.conf having:

```
CPUTYPE=p3  
CFLAGS= -O -pipe  
COPTFLAGS= -O -pipe
```

On the new system, videos don't display the video stream - just a black box with red dots on it. This happens with both plaympeg and xine.

I'm looking for suggestions on where to start debugging this issue.

Thanks,
<mike
