Hello All ,

I was trying to add a new ioctl cmd like

```
#define HDLCMODE _IOR('6',0xF,int)
```

when i try to uprintf the data which was sent from the user-space in the device-driver-ioctl-routine i'll get a different value than which is passed.

Can anybody please tell me why this is happening . I pass the address of integer from the user space as third arg to the ioctl call .

thanks and regards,

Rashmi.N.S
