Hi everybody!

One problem arised:

when doing in the shell
echo "~WS" > /dev/cuaR00

for several times as quick as I can, I get panic with the following message:
panic: device_unbusy: called for non-busy device rp0

same thing when trying to send data to /dev/cuaR00 via JDK File streams ...
:(((

(Some kind of barcode printers are attached to this multiport card)

Any help will be kindly accepted.

Cheers
Vit
