I've stuck with the unable to make watchdogs for daemons running via startup rc-scripts. In linux we can just put the process in the inittab. Does FreeBSD contains ability like this?

Create a script for /etc/rc.d (or /usr/local/etc/rc.d) – with a suitable entry in rc.conf it will be started at boot.

man rc.subr plus a look through /etc/rc.d should get you started :)
