hi!

i have a simple question, but i didn't found the answer.

after i set console=comconsole in the /boot/loader.conf
and rebooted every output has been sent to the serial console,
it's normal...

in /boot/defaults/loader.conf you will find the following line :
#console="vidconsole" # A comma separated list of console(s)

you can have both a serial console and a video console by setting :
console="vidconsole,comconsole"

awesome, thx!
