When kernel panics, the prompt "db>" will appear. But at this time I cannot control my computer with keyboard any longer. What's wrong with me?

I don't know what's wrong with you, but as regards your computer: disable kbdmux and use a PS/2 keyboard.

I've been comforted by you that there's nothing wrong with me.

Well, FreeBSD Developers' Handbook needs to be updated now.

http://www.freebsd.org/doc/en_US.ISO8859-1/books/developers-handbook/kerneldebug-online-ddb.html

The same to manual page ddb(4).
