What does the performance curve look like for the in-CVS 7-CURRENT tree with 4BSD or ULE ? How do those stand up against the Linux SMP scheduler for scalability. It would be nice to see the comparison displayed to see what the performance improvements of the aforementioned patch were realized to. This would likely be a nice graphics for the SMPng project page, BTW...

There are graphs of this on Jeff's blog, referenced in that URL. Fixing filedesc locking makes a HUGE difference.

Kris,

This is fantastic news! Is there an approximate date for when all of these patches are going to hit CVS?

Keep up the great work! :)  
Andy
