I have a Qlogic HBA card (QLA2342) in a machine running FreeBSD 6.2. FreeBSD sees the card and when the HBA is attached to a SAN we are able to see the disk space. The thing we can't seem to get working is a dual path to the same space. Can anyone point me in the correct direction to get this working?

See geom multipath (gmultipath) in -CURRENT. I think it's going to be MFC'ed at some point..
