Hello everybody,

I have an ULI M5263 NIC on my MaxSelect Mission AWD laptop.

I have tried all drivers, but they have not work. I searched driver in

Google

but I did not find. Some people(from opensbd mailing lists) said that this

NIC

is "dc-like" device. I added PCI IDs to if_dc, but it read only MAC adress.

I want to get working my NIC so I will do what will need to write a driver.

I know that I need to

read some books or articles, can you give me a list of them and any ideas

for my situation?
