OK -- at present I cannot get a 6.2 install disk to get anywhere further.

Trying FreeSBIE 2.0.1 (aka 6.2) I can get a boot with

```
set hint.acpi.0.disabled=1
set acpi_load=NO
boot -v
```

However it doesnt find the bge card nor has it found an fxp card we have tried, so I cant get to dmesg output off the machine....

What i have seen is that the ServeRAID 8i controller say it is on PCI bus 1:2:0

Nowhere in the boot log is pcib1 or any mention of the physical pci bus 1

Just to test I booted an IBM pizza box x305 with the FreeSBIE disk in the same fashion, and up comes its bge i/f, the boot -v logs show

```
pcib0 , pcib1 , pcib2
```

along with their associated physical busses.

Any help greatly welcomed
