I am attempting to install FreeBSD Current into this laptop. System boot well, but working very very slow (switching to next virtual console took 5–10 minutes).  
What could be the reason of this?

Hi,

I've had a similar problem with an A7T, if I'm not mistaken it's due to a bug in the thurion timer, you can use  
`machdep.cpu_idle_hlt="0"`  
in your loader.conf as a workaround.

Cheers,

Olivier
