-

Patch for the issue:

```
--- auditreduce.c.orig Mon Oct 22 21:32:07 2007
+++ auditreduce.c Mon Oct 22 21:30:13 2007
@@ -719,7 +719,6 @@
if (n == NULL)
usage("Incorrect event name");
p_evtype = *n;
- free(n);
}
SETOPT(opttochk, OPT_m);
break;
```

getauevnonam() returns a statically allocated event that the main function then attempts to free() for some reason. This patch is against 6.2-RELEASE so it's probably already out of date.
