

Reading from sound card broken in pererelease?

Source: <http://unix.derkeiler.com/Mailing-Lists/FreeBSD/hackers/2008-01/msg00143.html>

-

I tried to record sound from microphone and only getting errors.

During startup my soundcard is recognized as:

pcm0: <Creative EMU10K1> port 0xdc00-0xdc1f irq 17 at device 6.0 on pci0

pcm0: <TriTech TR28602 AC97 Codec>

pcm0: [ITHREAD]

When I am trying to record with rawrec-0.9.991:

/usr/local/bin/rawrec file

I am getting an error:

/usr/local/bin/rawrec: read syscall of dsp device failed: Invalid argument

And dmesg gets a new record:

pcm0:record:dsp0.r1: record interrupt timeout, channel dead

Should I file a PR?

Yuri
