An entirely different issue is why named uses so much memory... does anybody know of a way to specify how much memory named may use for its cache?

Something like :

```
options {  
directory "/etc/namedb";  
pid-file "/var/run/named/pid";  
*max-cache-size 10485760;  
};
```

According to <http://www.isc.org/sw/bind/arm94/Bv9ARM.ch06.html#options>
