I also made a comparison between gzip and bzip2 regarding the compression ratio on a dump of my home directory (3.2GB) bzip2 took about 74min to compress, gzip only 11minutes. And in terms of compression ratio bzip2 was only 3% better than gzip.

That's not a realistic test case. bzip2 normally takes trice the time and compresses 10% better. I can't comment on compress.
