Instead of using *.isot.com, try just specifying the dns name of one of your routers that you would like to log.

```
syslogd_flags="-a rtr1.isot.com"
```

If you get syslog messages with this, then try adding additional -a flags for each of your routers.

```
syslogd_flags="-a rtr1.isot.com -a rtr2.isot.com ... rtrN.isot.com"
```

You may want to send a message to FreeBSD-Current@freebsd.org informing them that remote logging isn't working for you.

Scot
