Now i figured out something...

previously I was using the following command to import all user entries in wheel group, but this doesnt work anymore?! it still works in 4.8 boxes though weird!?

+@wheel:::::::::

Subject: YP/NIS server in 4.8 and client 5.1 problem

I have a weird problem. I have been using YP/NIS without any problems until now. Now I have a 5.1 machine in my network just because 4.8 doesnt support SATA controller in the motherboard of the machine.

I have setup the YP/NIS client as I always did in 4.8 machines. Now in 5.1 I cant get the user passwords from YP/NIS server but somehow the group ids work fine. I am completely sure because the client gets the group id in `ls -la` listings. (I use `amd/nfsd` too)

Any tips? :)

Evren
