84 clients, 286 domains, 142 hosting accounts and 413 e-mail accounts.

I've already read those, but the backup utilities don't seem to support a MySQL dump only restore mode or something. They expect a dump made by psadump, which includes a whole lot of other stuff.

They said they could do it, but what I don't like is that they couldn't give a quote. If it's too expensive I could as well hire cheap labour to fill in the new server by hand...

Thanks anyway, it's a shame that no one seems to know how Plesks handles
the MySQL backend.
