I have recently purchased a game called battlefield 2. Everytime that I get it uploaded and ready to go it shows the start up battlefield 2 title and then error message saying "d3dx9_25.dll was not found" I originally thought that it might have been a problem with my video card so I bought the radeon X800xl with 256 mb to remedy the problem. However this did not ready the problem, same error comes up, all of my other games run extremely smooth now though. what do i do?
