Try symlinking libm.so.4 to libm.so.2, I have seen stranger things work and since your moving forward you have a decent chance of it working ( as opposed to linking libm.so.2 to libm.so.4 ), Also, check to see if there is a static build of the shoutcast server, that would eliminate any library dependences.

Please don't flame me, I *\*know\** what i'm suggesting is SO *\*very\** wrong, but it might just work :P

```
./sc_trans_freebsd  
results in the following error.  
/usr/libexec/ld-elf.so.1: Shared object "libm.so.2" not found,  
required by "sc_trans_freebsd"
```

libm is libm.so.4 in 6.0-R, so you have a stale library dependency. Was the upgrade a clean binary upgrade (wipe and reinstall) or did you do a source upgrade? Did you build the shoutcast server from clean source after upgrading or was it a binary-only distribution?

Re: SHOUTCAST AND OTHER MEDIA SERVER. BSD 6 compatible?

You will have to wait until they release a 6-STABLE binary unfortunately, or run the linux version with compat.

Thanks,  
Joe
