You can take a look at Johncompanies.com. They offer BSD and linux hosting at pretty good prices. Their linux stuff is so so, but their FreeBSD offering looks good.

Our client needs a web-hosting at USA. Can you give me some advices based on your experience? Reasonable prices, good support are welcome.

Also he needs:

- o disk space: 10GB;
- o PHP 4.1 or up;
- o MySQL 4 or up;
- o ZendOptimizer;
- o mail account less than 100;
- o bandwidth is unknown so far, but I think that 200-250 GB will fit his needs.

PS. I'm aware of <http://www.freebsd.org/commercial/isp.html>. I/d like to get a feedback from real customers...

Anybody?

WBR
