-

When POSTing big form I just get such error

While trying to retrieve the URL: <http://win.mail.ru/cgi-bin/sendmsg>

The following error was encountered:

Read Error

The system returned:

(60) Operation timed out

An error condition occurred while reading data from the network. Please retry your request.

The part of config is:

```
acl xdsl src 10.80.0.0/16
acl adsl src 10.90.0.0/16
tcp_outgoing_address IP_1 xdsl
tcp_outgoing_address IP_2 adsl
```

```
http_access allow xdsl adsl
```

It happened when we changed primary ISP. On IP_1 everything works fine. On IP_2 – troubles. Without proxying works fine on IP_1 and IP_2. Proxying is transparent. Using ipfw2. Please help.
