hi!
i use freebsd 6.2
there is some strange error –
when i try this command : "pkg_version -v"
i get endless list:
pkg_version: BABagntux is not a valid package!
pkg_version: BABagntux is not a valid package!
pkg_version: BABagntux is not a valid package!
pkg_version: BABagntux is not a valid package!
pkg_version: BABagntux is not a valid package!

when i try this command : "pkgdb -F"
---> Checking the package registry database
BABagntux: Not in due form: <name>--<version>

what does it means?

You have something in /var/db/pkg/BABagntux which is not a valid package registration.

thanks
so, how can i solve this problem?
there are several files in that directory
mail5/ #/var/db/pkg/BABagntux>ls -l

Re: Error : pkg_version

total 14

```
-rw-r--r-- 1 root wheel 68 Aug 30 2006 +COMMENT  
-rw-r--r-- 1 root wheel 5777 May 8 15:47 +CONTENTS  
-r-xr-xr-x 1 root wheel 705 Aug 30 2006 +DEINSTALL  
-rw-r--r-- 1 root wheel 68 Aug 30 2006 +DESC  
-r-xr-xr-x 1 root wheel 1790 Aug 30 2006 +POST-INSTALL
```

You may try to delete this directory, if this software is not needed,
or look version of files (look +CONTENTS, find installed executable
files, run those with key `-v`, `--version` or `-V` and get version in view
X.X.X), after rename directory to BABagnetux-X.X.X.
