```
hi!
i use freebsd 6.2
there is some strange error -
when i try this command : "pkg_version -v"
i get endless list:
pkg_version: BABagntux is not a valid package!
pkg_version: BABagntux is not a valid package!
pkg_version: BABagntux is not a valid package!
pkg_version: BABagntux is not a valid package!
pkg_version: BABagntux is not a valid package!

when i try this command : "pkgdb -F"
---> Checking the package registry database
BABagntux: Not in due form: <name>--<version>

what does it means?
```

Hello,

You would probably find more help on the freebsd-ports@xxxxxxxxxx mailing list. There you will find many knowledgeable people with expertise in the FreeBSD ports system.
