<http://www.freebsd.org/~sam/rawsock.patch>

This locks the raw socket protocol control blocks using equivalent techniques to those used for udp, etc. There is one code restructuring done to simplify this work; equivalent to the one I added for udp.

Note this change also removes the `rip_olddiverterror` sysctl. It was marked as "to be removed". I'll probably leave it alone and/or remove it in a separate pass.

Sam
