Hi, all

I want to build a network as shown below.  
All devices is in my responsibility except the  
upsteam router. My question is

If I will assign public IP address to all  
interfaces, is it necessary that I must  
inform the upstream router's administrator  
to add my subnet in routing table of upstream  
router ?

Or any comments are welcome.

freebsd-net: How can I subnetting my network ?

Thanks in advance,  
Pote
