Hi everybody,

Has anybody succeeded to configure a cable modem SB4200 (4100) using the USB connection (any FreeBSD release :)) ?

Is there any chance that this USB modem will get support under FreeBSD? (there is already supported by Linux, by CDCEther module...)

Any references or pointers are mostly welcomed!

Thanks a lot!

Regards,
/Dorin.

PS. The dmesg shows that the system recognize it but it associate the USB generic driver with it; I have not been able to use the ifconfig to make it work.

=====
/Dorin.
