Hi list,

I don't know what is wrong with the freevrrp setup in my FreeBSD 5.4.

After setup and started freevrrpd, I tried to ping both interfaces in localhost, only one interface appeared responded to the icmp echo request packets, the interface associated with ip 192.168.1.1 is down; while 192.168.4.1 is fine. Both IP addresses are assigned by freevrrpd daemon.

```
# ping 192.168.1.1
PING 192.168.1.1 (192.168.1.1): 56 data bytes
ping: sendto: Host is down
^C
---- 192.168.1.1 ping statistics ----
7 packets transmitted, 0 packets received, 100% packet loss
root@gateway [8:20pm] [...local/etc]# ping 192.168.4.1
PING 192.168.4.1 (192.168.4.1): 56 data bytes
64 bytes from 192.168.4.1: icmp_seq=0 ttl=64 time=0.173 ms
64 bytes from 192.168.4.1: icmp_seq=1 ttl=64 time=0.100 ms
^C
---- 192.168.4.1 ping statistics ----
2 packets transmitted, 2 packets received, 0% packet loss
round-trip min/avg/max/stddev = 0.100/0.137/0.173/0.036 ms
```

Can anyone please help?

Thanks

Sam
