Hi Mathias,

I've managed to get Quagga + FreeBSD 4.x/5.x to establish BGP sessions with Cisco routers with MD5 password authentication.

You'll need to ensure you build Quagga with MD5 support (the current port gives you the option during build), compile your kernel with relevant TCP_SIGNATURE and crypto support (options vary depending on if your using 4.x/5.x), use setkey, and add the usual neighbor x.x.x.x password yyyy to Quagga.

Let me know if you need any more info/help..

Regards,
Lee.
