You can use zebra (quagga) daemon for interface description:

```
# sh int vlan17
```

```
Interface vlan17 is up, line protocol detection is disabled
```

```
Description: --- Customer 8140, room 411
```

```
index 14 metric 1 mtu 1500 <UP,BROADCAST,RUNNING,SIMPLEX,MULTICAST>
```

```
HWaddr: 00:90:27:af:77:f6
```

```
inet 192.168.14.1/24 broadcast 192.168.14.255
```

```
input packets 5718144, bytes 812660461, dropped 0, multicast packets 119814
```

```
input errors 0
```

```
output packets 7149073, bytes 2620267769, multicast packets 0
```

```
output errors 0
```

```
collisions 0
```

```
/usr/ports/net/zebra
```

```
/usr/ports/net/quagga
```
