I'm using MFC'd one for RELENG_6:

http://www.freebsd.org/cgi/cvsweb.cgi/src/sys/compat/ndis/subr_ntoskrnl.c?rev=1.71.2.6&content-type=text/

I was getting more "missing feature" errors before trying the patch and upgrading to 6.2-STABLE.

I've tried a half a dozen different drivers and none of them worked. But even if they did, I would only want to use driver version 4.100.15.5 or newer because it contains a fix for a nasty security hole on Windows that could indirectly affect BSD via NDISwrapper.

Maybe I should try contacting Sam Leffler by email to see if he could modify his patch to fix my problem?

Sam is really busy right now (I am too :-). If someone hasn't gotten to it in a week ping me again and I will try to fix it. I need to set up a RELENG_6 install this weekend anyway.
