Hello,

I hope this is actually the right list and my request isn't too outrageous.

I am looking for a working IGMP proxy for FreeBSD 6.2. My ISP is offering TV over IP using IGMP. I use pfSense as a gateway.

Research so far gave me this:

1. Activating multicast routing in the kernel is easy – just one line.
2. The program "mrouted" doesn't help, it seems it can't work with dial-up scenarios.
3. There is one IGMP proxy here (<http://potiron.loria.fr/projects/madynes/internals/perso/lahmadi/igmpv3proxy/download>) but it was done on 4.x and author, while helpful, doesn't seem to work on it anymore. Simply can't compile it.
4. Since IGMP multicasts will be more and more common (eg BBC too: <http://forum.zensupport.co.uk/thread/10974.aspx>) I kindly ask for someone to maybe port the working one from Linux (<http://sourceforge.net/projects/igmpproxy>) to FreeBSD.
