hi all,
is there any already existing Netgraph node that would allow me to replace bytes in the data part of a packet? I'm talking about generic "foo" for "BAR" replacement, though different lengths would be good too.

or maybe other tool can do this too?

ports/netsed + pf/ipf (for transparent proxying)
Of course, the overhead is big.

thanks!
B

If it's there, and you can see it, it's real.
If it's not there, and you can see it, it's virtual.
If it's there, and you can't see it, it's transparent.
If it's not there, and you can't see it, you erased it.
