current i386 thinkpad t41

```
ifconfig_lo0="inet 127.0.0.1/8"
cloned_interfaces="bridge0"
ifconfig_bridge0="inet 192.168.0.3/24 addm em0 addm ath0 up"
ifconfig_em0="up"
ifconfig_ath0="ssid rgnet up"
defaultrouter="192.168.0.1"
```

with ether plugged in, i can ping it. unplug ether and no ping over ath0. other hosts are on same ssid and working.

I will try to reproduce this in the weekend. Just to make sure, you are pinging 192.168.0.3 from a remote wireless node connected to ath0, and unplugging em0 causes this to fail?

connect both wireless and ether. it is pingable. disconnect ether. no can ping.

reduce to
ifconfig_ath0="inet 192.168.0.3/24 ssid rgnet up"
with no em0, bridge, ... and it is pingable.
