Hi all,

i have a question that has been on my mind for some time now. I want to change the level and pitch of the console beep (other people in my house don't have to wake up if i mistype). Ive seen this option with various Linux distributions. After looking in the manual (on beep and curses and ctrl-f beep in the single page file handbook), and googled on FreeBSD beep i wasn't able to find it.

I hope this isn't too basic, but i my search-keyword inspiration has left me.

Regards Vincent
