Hello FreeBSD.org,

My name is Sergey Belyankin, I am new to FreeBSD and UNIX in general. I need your help in configuring my video card, at the time of installation I didn't see my card in the list of video cards, so I skipped that step. Now when I log in and type in startx, the screen turns off. I am assuming there is a file somewhere that hold the config for the video card, would you be able to tell me what file it is and what I would need to put in there in order to make my Radeon 9600XT work properly?

Thank you,  
Sergey.
