(my first time working with cvs)

For my small programming project on this home FreeBSD box I created a /home/cvs directory where I intend to store the files related to the st4nk project and added myself to the cvs group. I ran the cvs init and cvs import commands to get my project up and running. This is the directory structure I'm left with:

/home/cvs/st4nk/CVSROOT <- created when I did the cvs init command
/home/cvs/st4nk/st4nk <-created when I did the cvs import command

all my project related files and subdirectories wound up in the /home/cvs/st4nk/st4nk subdirectory. So it looks like it all worked out, yes?

hopeful look

Steve Bopple
