i'm using openssh-portable from ports, and it works fine,
perhaps you need this in sshd_config as default ?

SyslogFacility AUTH

LogLevel INFO

> *2. how do I get some kind of a system that "warns" me when a port is*

this is a possible script to use :

```
#!/bin/sh
/usr/local/sbin/portsclean -CD
/usr/local/bin/cvsup -g -L 2 /root/bin/ports-supfile
# /usr/local/sbin/portsdb -uU
# changed this (line above) because making the INDEX takes really long
cd /usr/ports/
make fetchindex
# these last 2 lines needs to be 1 line :
/usr/local/sbin/portversion -v | /usr/bin/grep needs | /usr/bin/mail -s
"Ports die niet up to date zijn" your@emailaddress.nu
```
