Hello,

I would like to recompile my system with ipfw2 default to deny.

I have local net behind of my freebsd, and I want to pass all packets from this subnet to Internet, except netbios (135-139 udp and tcp). So

I think firewall rule can be like this add allow tcp from

xxx.xxx.xxx.xxx/24 to any "{not 135-139}" (and one more for udp).

Is it rule correct?

P.S. I have to maintain default to deny firewall.

--

Best regards,

Vladimir
