Better suggestion: Ask your question on an appropriate list such as freebsd-ports@freebsd.org or freebsd-questions@freebsd.org since this list charter does not include answering technical questions.

That being said, have you been reading and following instructions in /usr/ports/UPDATING after each cvsup? Some of the errors you are seeing sound familiar. Have you searched the mailing list archives to see if similar problems have been encountered? These are some of the things you should do before asking on the preceding lists.

Good Luck,

Randy

PS. You might want to get a real name. This isn't slashdot.
