Hi All,

When I try to boot from CD-ROM to install my FreeBSD 4.8 i386

my computer stops to work. I do:

- 1) Booting from CD-ROM
- 2) Skip kernel configuration.
- 3) Then I see:

[...something before...]

ppc0: FIFO with 16/16/8 bytes threshold

ppbus0: <Parallel port bus> on ppc0

plip0:<PLIP network interface> on ppbus0

[That is all. Now he stops.]

I have:

SATA Hard Disk

Ultra ATA Storage Controller – Onboard

Intel Pro100MT Gigabit Ethernet Adapter – Onboard

Any idea?

Cheers,

Ann
