Folks,

Some time ago I started developing a generic performance analysis framework for FreeBSD called "boot\_tester." It got shelved for various reasons but given the recent increased interest in performance analysis I've found a little free time, tweaked the code and web site and now I'm offering it for testing. It's BSD license.

The web site is:

[http://people.migus.org/~amigus/boot\\_tester/](http://people.migus.org/~amigus/boot_tester/)

If you have any questions or comments please email me.
