+--le 10/12/2005 14:58 -0800, Jin Guojun [VFFS]  crivait :  
| What is "netstat -m" output on your machine?
```

```
130 mbufs in use  
128/8640 mbuf clusters in use (current/max)  
0/24/2416 sbufs in use (current/peak/max)  
288 KBytes allocated to network  
0 requests for sbufs denied  
0 requests for sbufs delayed  
6 requests for I/O initiated by sendfile  
15692052 calls to protocol drain routines
```

Is this the status when you see a number of droops?
If so, things get wierd somehow, and I hope you can provide
some details on how two machines set up (hardware, FreeBSD OS,
who sends syslog to who, and what is the frequency), so I may set
similar environment at my site to see if I can reproduce such lost.
