I'm saying that the 7.0-CVS sources, which are graphed, are unlikely to differ significantly from 6.2-CVS, i.e. they do not show good scaling on this benchmark because of the problems with filedesc locking in CVS.

Could you give a link to the 7.0-CVS graph?

Some of the data is old (e.g. the Linux curve is normalized too high because I was trying to compare it from another machine and the baseline comparison was wrong), but all the FreeBSD data is from the same machine.

Kris
