Just installed gaim out of the ports and added my AIM screen name to it and I can send and receive messages, but it shows me as offline to anyone else even though I see others as online. Anyone know why that would be? All I need Gaim for is for my one AIM name. If anyone can think of a better client than this, I'm game for it. :) If not, then if someone can help me solve this I would be very grateful.
