Hi!

Many – especially scientific – sites publish in postscript (.ps) format. I always have to save these files to my local harddisk, before I can open them in ggv.

Has anybody worked out, how these files can be rendered directly via mozilla?

I tried to put ggv into the "view with application ..." dialog. This will start ggv, but it can't fetch the file from the remote server. I also tried gs, but that will crash immediatly. acroread should be able to do this, but frequently complains about defect .ps code.

Any more ideas?

Regards,

Uli.
