Hello, my name is Bogdan Faina and I wrote you a couple of times regarding to the HDF5 installation. I read the notes about this matter and I tried to install first only the precompiled binaries for freebsd_4.9 but I've found out that in the ports packages exists the HDF5 latest version available so I have updated the freebsd packages and then from ports I did <<<<<make install clean>>>>. So that way the computer installed itself the Hdf5. Until here it's all alright but I don't understand a thing: Why it is not included the fortran90 compiler h5fc.

Please answer me these questions:

How can I add the Fortran90 compiler to my actual Hdf5?

What solution exists to this matter?

How can I get some help regarding to the understanding how Hdf5 works?

Can I get a mail address from someone who uses Hdf5 and is available to explain to me how it works or if it is a forum for Hdf5 users?

I'm a student at Physics and I need Hdf5 to complete my Bachelor Degree and to use it storing data from a program that simulates Crystals Growth.

Thank you for your time and I can hardly wait to hear news from you.
