I can connect to my home machines from work using "runsocks ssh". Now it seems to me that I ought to be able to build a full blown VPN tunnel using this, right?

A little Googling suggest that one approach might be to use ppp over the tunnel. Given that the 2 machines involved are both FreeBSD STABLE machines, can anyone point me to some docs as to how to do this?

What I want to accomplish is full biderctional connectivity. That is I want to be able to connect to my machines at home from work, and from home to the machines at work.

Thanks for any help on this.
