

Can;t start X server

To: freebsd-questions@freebsd.org

I'm getting an error when gdm attempts to start and /var/log/Xorg.0.log shows:

Fatal server error: could not open default font 'fixed'

How do I tell which font it's trying to load? I thought it might be xorg-fonts-miscbitmaps but that's already installed. This is a FreeBSD 5.3-RELEASE box with stock kernel.

Thanks.
