Basically, i disable all that i dont need, and keep all first options , cause i didnt new at the first if it was any commented option that was provoking these block in boot.

there's anything i commented that i shouldn't?? because the only option is a bad kernel config, because it stops working after upgrading.

At the first i think at pseudo-devices, but i just commented sl pp and tun, wich is needed only for ppp and i have cable connection,

thanks:

kernel config:

---

```
machine i386
cpu I686_CPU
ident MYKERNEL
```

```
options SCHED_4BSD
options INET
options INET6
options FFS
options SOFTUPDATES
options UFS_ACL
options UFS_DIRHASH
options MD_ROOT
options NFSCLIENT
options NFSSERVER
options NFS_ROOT
options MSDOSFS
options CD9660
options PROCFS
options PSEUDOFS
options GEOM_PT
options COMPAT_43
options COMPAT_FREEBSD4
options SCSI_DELAY=15000
options KTRACE
```
